AQILLA LAUNCHES LATEST UPGRADES AT SOFTWORLD 2009

Delivers new journal processing, enhanced accruals management and analysis configuration wizard

Aqilla users now have access to a range of additional functionality, with the launch of the latest version of the web-based accounting software. The company will showcase the latest release, Aqilla 909, at Autumn Softworld 2009, which takes place at London Olympia 2, October 13-14, 2009.

The new features are designed to further support the modern finance department, and include:

- Streamlined journal handling processes
- Alterations in the definition of account terms and the impact of due dates
- Purchase invoice matching now completes the last stage of a complete purchase-to-pay control process
- Enquiries now provide an additional drill through to matched transactions

In addition, Aqilla 909 also features a new Attribute Configuration Wizard which streamlines the process of defining the specific information required for analysis, all the way through from document capture to final management reporting. This delivers fast and efficient setup of key data to improve overall visibility of key metrics and support better organisational financial control.

Hugh Scantlebury, director at Aqilla, said: "The modern finance department exists to support the business, so needs to have tools to do this and for them to quickly adapt to their needs. Using a web-based accounting system has a huge range of benefits, one of which is being able to roll out new functionality instantly, without the need for any downtime."

An Aqilla Pro subscription is priced at £50 (excl. VAT) per user per month; data entry users for straightforward entry and capture of timesheet and expense documents are charged £10 (excl. VAT) per user per month.

Visit Aqilla on stand AF194 in the Online Accounting Zone at Softworld, or visit www.aqilla.com.

About Aqilla Limited

Aqilla Limited, founded in 2006, is the developer of web-based accounting solutions designed for small and medium-sized businesses and accountancy firms. The easy-to-use software utilises the latest open source toolsets based around Java and AJAX technologies to deliver Sales Ledger, Purchase Ledger, General Ledger, Cash Matching, Sales Invoicing, Purchase Invoicing and Time Management functions that can be accessed over the internet via a rich web browser interface. In addition, because it is delivered on-demand, Aqilla removes the need for high levels of capital outlay, as well as the ongoing expense of maintenance and management.
